Part 3: TRANSITION FROM ONE ENVIRONMENT TO ANOTHER

[3-A: How the Flood Re-modeled Our Earth's Environment](#)

[3-B: Pictorial of the New Features in Our Post-Flood Environment](#)

[3-C: A Further Word about the Giants](#)

[3-D: Was There an Ice Age?](#)

[3-E: Early Migration Before the Rise of Civilization](#)

Clouds: A shelf cloud associated with a heavy or severe thunderstorm over Enschede, Netherlands

Rainfall:
Spectacular scene in Bangalore, India, as viewed from the Nandi Hills

Lightning

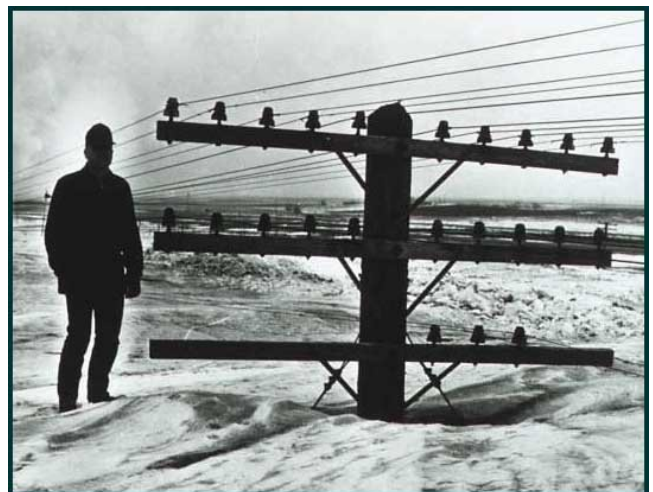

Hurricanes

and Tornadoes

Deserts: The pre-Flood world may have had dry areas, but likely, it did not experience the kind of extreme heat found in many deserts of our present environment.

Snow and Ice: A man stands near a utility pole in North Dakota, USA, March 9, 1966. A late-winter blizzard produced snow and wind-blown drifts

so high that utility poles were nearly buried.

Frigid Polar Regions

High and Rugged Mountain Ranges: Scene from Himalyan Mountains

**Vast
Expanse of Oceans Separating Afro-Eurasia from the Americas**
